3i Fleet Information Management System

The new 3i Fleet Information Management System (3i FIMS) by 3i Technologies is a premiere product for our valued customers. This service is backed by Inmarsat's FleetBroadBand Service and it enables you to use the internet, send emails and have video streaming while sending reports at sea to your Operations Centre anywhere in the world.

Key Features

- **Situational and Operational Reports**
Reports such as position reports, weather conditions, operational cargo, fuel level, engine rpm and crew status or any customised information can be sent to FIMS by vessel personnel or automatically.
- **Vessel performance and location**
Vessel Performance and Location Information is sent through 3i FIMS to your Company's database server.
- **Vessel Cargo Reports, Inventories and Requisitions**
Important information on the status of your cargo or inventory can be sent periodically to 3i FIMS keeping Operations informed about the status of the fleet.

Added Features

- Operations Centre can generate customised reports to Management to help in decision processes.
- Crew internet and clear voice calls.

Key Benefits

- Eliminate un-standardised voice reports and expensive satellite phone calls back to operations.
- Standardised Reporting Formats across your fleet.
- Quick generation of Reports
- Analysis of data in database
- Email Exchanges
- Customised to your needs.

System

- All transmission terminals come with standard Voice, SMS
